# Natural Gas Facts

Natural gas is located underground. Natural gas is refined in a processing plant and then put into storage.

Natural gas goes through the city gate.

This is an important step because a chemical is added to make the gas smell; this is how we can tell if natural gas is leaking!

## WORD BANK

city

electricity

chemical

storage

natural gas

leak

underground

pipes

Draw a picture of something that runs on natural gas in your house.

# Natural Gas Safety

YES or **NO** Can you see natural gas if it's leaking? (Circle the right answer)

Natural gas smells like? Rotten eggs

What can happen if natural gas is leaking?

A fire or explosion

## Take the Right Steps

Write the safety phrase under the right picture, and learn what to do

Tell an adult

Don't make a spark

Don't try to find where the smell is coming from

Leave the area and go to a safe place

Call for help. Dial 911 or call Consumers Energy at 1-800-477-5050

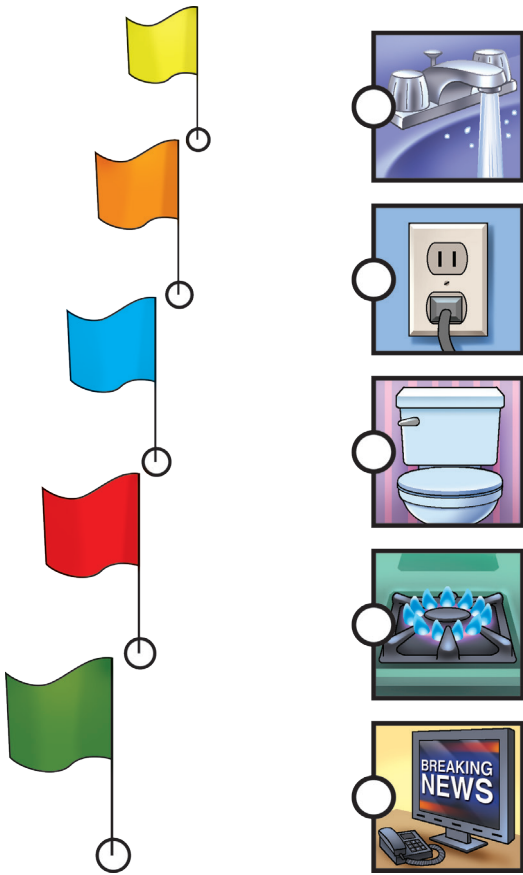

Wait until it is safe to go back inside

# Respect the Flags

Flags are used to mark pipes and wires that are buried underground.

Match the flag to the correct utility.

Before starting a digging project, you should always call

**Miss Dig at 811**

Know what's below.  
Call before you dig.
